

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: OpenLearn Vault

Project / Product Name: OPENLearn Vault

Organization / Institution (if any): RV College of Engineering

Submission Date: 08/05/2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes / No

Yes

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming Used AI for brainstorming project ideas, AI-native educational workflows, semantic search systems, AI mentor capabilities, intelligent study planning, and feature architecture for OPENLearn Vault.

Code generation or assistance Used AI for generating implementation guidance, frontend/backend architecture ideas, React/Next.js structures, API integration logic, semantic search workflows, RAG pipeline concepts, and debugging assistance.

UI / UX design Used AI to design futuristic AI-native UI/UX inspired by Apple VisionOS, Perplexity, Notion AI, Arc Browser, and modern productivity platforms including layouts, animations, focus modes, and interactive learning experiences.

Content creation Used AI for writing feature specifications, project documentation, UI descriptions, AI mentor workflows, educational interaction flows, and prompt engineering instructions.

Data analysis Used AI for planning semantic search ranking, contextual retrieval logic, learning analytics ideas, knowledge graph relationships, and personalized recommendation workflows.

Testing / debugging Used AI assistance to improve AI search logic, debug mentor workflows, optimize retrieval pipelines, refine UI interactions, and identify implementation issues.

Other Used AI for prompt engineering, system architecture planning, workflow optimization, AI feature enhancement, and educational platform design.

4. Feature Origin Classification (Please add/delete based on the number of the feature)

1. Feature Name AI Mentor System

2. Self-Generated/AI-Generated/Both Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification) The AI Mentor concept was designed by the project team and enhanced using ChatGPT/OpenAI assistance. AI tools(Lovable) were used to generate mentor workflow prompts, conversational learning features, contextual doubt-solving logic, semantic retrieval ideas, and adaptive educational response systems. Prompts focused on making the mentor deeply understand library materials, answer student doubts intelligently, retrieve contextual educational content, and provide personalized explanations. The generated outputs were reviewed, customized, and integrated into the project design according to the team's objectives.

1. Feature Name AI Semantic Search System

2. Self-Generated/AI-Generated/Both Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification) The feature idea and workflow were initially conceptualized by the project team and further refined using ChatGPT/OpenAI tools. AI(Lovable) was used to generate semantic search enhancement prompts, RAG workflow ideas, contextual retrieval logic, YouTube educational integration concepts, and intelligent UI interaction suggestions. Prompts included instructions for improving AI search, prioritizing internal library content, quoting relevant chapter material, and integrating educational YouTube recommendations. The AI-generated outputs were modified, refined, and adapted according to project requirements before implementation planning.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: Abel Paul N

Role: Project Developer

Signature: Abel Paul N

Date: 08/05/2026
